1. (Currently Amended) A method for treating a subject having inflammation associated with neurotrauma, said method comprising administering to the [[a]] subject having ~~neurotrauma~~ a therapeutically effective amount of a non-steroidal, anti-inflammatory salicylate drug (NSAID), or a pharmaceutically acceptable salt, ester, amide, or prodrug thereof non-inhibitory of platelets, wherein said NSAID is intrathecally delivered by intrathecal catheter so as to reduce the inflammation associated with the neurotrauma.

2-3. (Canceled)

4. (Original) A method according to claim 1, wherein the non-steroidal anti-inflammatory drug comprises choline magnesium trisalicylate.

5. (Original) A method according to claim 1, wherein the non-steroidal anti-inflammatory drug comprises sodium salicylate.

6. (Original) A method according to claim 1, wherein the non-steroidal anti-inflammatory drug comprises salicylamide.

7. (Original) A method according to claim 1, wherein the non-steroidal anti-inflammatory drug comprises a deacetylated aspirin.

8-28. (Canceled)
